

IMAGEQUBE QUICKCACHE

The ImageQube QuickCache is designed to provide clinics that share a hospital's database with immediate access to patient exam data. Rather than waiting for the exam to be transferred from the clinic to the hospital then sent back to the clinic for review, the ImageQube QuickCache delivers instantaneous availability for the clinic physicians.

The ImageQube QuickCache is an affordable option allowing facilities to overcome network limitations and get the benefit of increased speed and efficiency without the expense of increasing bandwidth. The end result is improved patient care and service.
